

Pseudocode:-

Date:.....

Problem 1 :-

START

DECLARE Num1, Num2, Num3 AS INT;

INPUT Num1, Num2, Num3;

IF Num1 > Num2 AND Num1 > Num3 THEN

PRINT Num1;

ELSEIF Num2 > Num1 AND Num2 > Num3 THEN

PRINT Num2;

ELSE PRINT Num3;

ENDIF

END

Date:

Algorithm:-

Problem:-

1- Ask user to input number.

2- If Num = 1 THEN PRINT January

..... = 2 THEN PRINT February

..... = 3 THEN PRINT March

..... = 4 April

..... = 5 May

..... = 6 June

..... = 7 July

..... = 8 August

..... = 9 September

..... = 10 October

..... = 11 November

..... = 12 December

Algorithm:-

- 1- Ask user to input divisor.
- 2- Ask user to input the number.
- 3- Check if $\text{number} \% \text{divisor} == 0$
- 4- If true, then check if $\text{number} \% 2 == 0$. If true, then print "number is divisor of number and it is even". If false,
- 5- If false then print "divisor is divisor of number and it is odd."

Pseudocode:-

START

DECLARE Num AS INT ;

INPUT Num ;

switch (Num)

Case 1:

PRINT "January" ;

Case 2:

PRINT "February" ;

Case 3:

PRINT "March" ;

Case 4:

PRINT "April" ;

Case 5:

PRINT "May" ;

Case 6:

PRINT "June" ;

Case 7:

PRINT "July" ;

Case 8:

PRINT "August" ;

Case 9:

PRINT "September" ;

Case 10:

PRINT "October" ;

Case 11:

PRINT "November" ;

Case 12:

PRINT "December" ;

default : PRINT "Invalid number" ;

ENDSwitch

END
